ABOUT LIONA ENTERPRISES

Founded in 2015, Liona Enterprises Inc. is a growing information technology services provider. Liona Enterprises develops products and solutions for government and commercial clients. We provide in-depth IT assessment, specifically tailored to integrate new and existing systems, and to secure the diverse technologies of an organization.

STRATEGIC SOLUTION

"Time and accurate IT inventory enabling speed to insight for actionable decision making"

Annual IT inventory takes too long, ties up my staff, and the customer must write off tens of thousands of dollars of IT equipment each year. There must be a faster, cheaper, more, and accurate way to perform the inventory. The inventory is a waste of resources. The mission is severely interrupted once a year to perform the annual IT inventory. Real work is delayed because of the inventory. The inventory accuracy is too low to make tactical or strategic decisions. The system of record is not conducive to analytics and decision making.

TechTracker asset management solution by Liona Enterprises Inc. provides corporate tested, modern tools such as mobile terminals, barcodes, and Radio Frequency Identification (RFID) technology to perform inventories faster and more accurately. TechTracker provides near real-time asset accountability for analytics and decision making.
Using TechTracker, senior leaders get accurate actionable data for decision making, with minimal disruption to the mission while limiting the amount of IT equipment write-offs.

VALUE ADD

- APPROVED Airforce product list
- Interim ATO Sponsored by Buckley AFB
- High level assurance in information
- Meets government regulatory and fiduciary requirement
- Unique IT management for Cybersecurity
- Data driven

WHY

- TechTracker is a lightweight solution only requiring a SQL and IIS server.
- TechTracker is purpose built for asset management.
- TechTracker is designed to be highly configurable without reprogramming, allowing for rapid deployment against the customer requirements.
- TechTracker can have customizations incorporated rapidly.
- US developed and built.
- TechTracker can integrate with backend solutions such as Workday, Peoplesoft, ServiceNow, and DPAS providing these solutions with greater capability.
- Low cost and rapid ROI.
- Can use manual entry, barcode, or RFID.
- Enables multiple business lines of assets to be tracked together or separately depending on the need.
- Custom reporting.
